BATCH: 2020-2024

MINI PROJECT

AUTOMOBILE MANAGEMENT SYSTEM

Under the guidance of:
Mrs.Hymavathi mam

TEAM MEMBERS:

M. Saraswathi (20D41A05C2)
M. Mahesh Chandra (20D41A05D0)
S. Deekshitha Reddy (20D41A05H9)

AUTOMOBILE MANAGEMENT SYSTEMS

AGENDA

- Abstract
- Introduction
- Existing System and Disadvantages
- Proposed System and Advantages
- System Architecture
- Modules
- System Requirements
- Uml diagrams
- Screens shots of Executions
- Conclusion

ABSTRACT

- This will help new buyers to understand the maintenance costs of a certain model and probability of which car part requires more often servicing.
- Vehicle maintenance patterns across car models by mileage, usage , age of the vehicle , regional patterns across dealers, service stations and car manufacturer. Purpose and who will benefit

INTRODUCTION

- With real-time tracking, automated maintenance scheduling, and data analytics, our system provides a comprehensive solution to all your automobile management needs. Say goodbye to manual tracking and paper-based documentation, and hello to a more efficient and effective way of managing your fleet.

- The Automobile Management System is a comprehensive web-based application designed.
- It efficiently manage charges, payment and customer.

- Advanced search option for Booking, Delivery , Order , and services records.
- Easy-to-use CRUD operations for Automobiles ,and services management.
- Efficient search capabilities for charges, services, payment and customers.

AUTOMOBILE MANAGEMENT SYSTEMS

- Its primary goal is to streamline administrative tasks and reduce manual efforts associated.
- With Automobile Management System you can manage with "**user-friendly interface**".

EXISTING SYSTEM

- Existing System is a in which are maintain to store the information like product details , distributors, details .
- It is very difficult to maintain historical data

DISADVANTAGES

- Increased repair: when vehicles are not maintained regularly.
- Decreased safety: vehicles are not properly maintained are more likely to experience mechanical failure or breakdowns while on the road.
- Reduced vehicle lifespan: regular maintenance can help extend the lifespan of a vehicle.

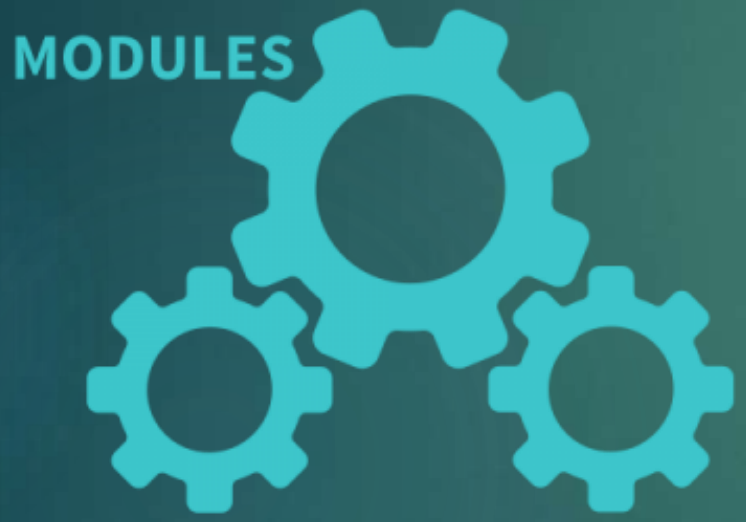
PROPOSED SYSTEM

- The Automobile management system is a software application which avoids more manual hours that need to spend in record keeping and generating reports.

ADVANTAGES

- Reduced repair costs
- Extended vehicle lifespan
- Improved resale value
- Increased efficiency

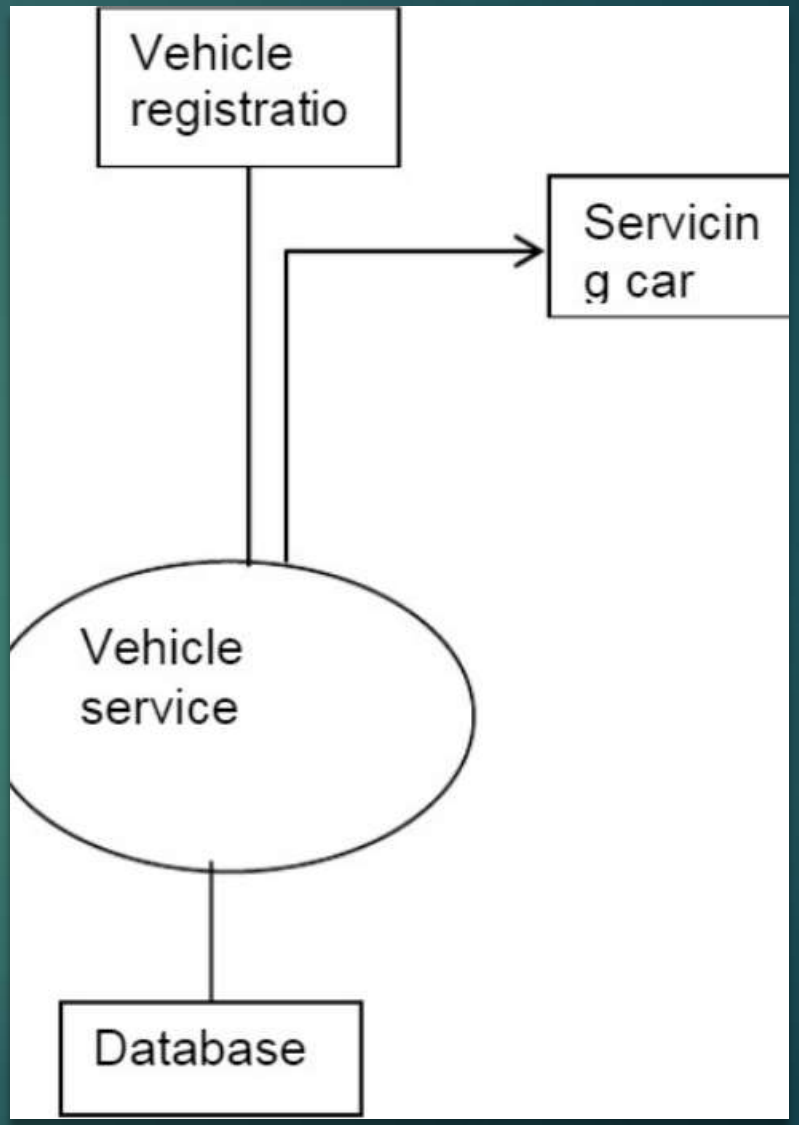
MODULES



In this project, I have used 3 modules which are listed below:

- Admin
- User
- Service

SYSTEM ARCHITECTURE



SYSTEM REQUIREMENTS

Hardware Requirements:

- Hard Disk: 40GB
- Ram: 1GB

Software Requirements:

- Operating System: Windows 10
- Coding Languages: JAVA, HTML, CSS
- Database: MySQL

UML DIAGRAMS:

- Class diagram
- Component Diagram
- Deployment Diagram
- Use case Diagram
- Sequence diagram
- Activity diagram
- ER
- Collaboration diagram

USE CASE DIAGRAM:

CONCLUSION

- The Automobile Management System project represents a significant milestone in the realm of automotive technology and management. Throughout its development, we have witnessed the seamless integration of cutting-edge software and hardware solutions to enhance the efficiency, safety, and convenience of automobile operations.

THANKYOU
